Overview & Current Events

Exxon Mobil is a diversified energy giant with a market capitalization of \$240.3 billion. In 2019, the upstream segment generated 83% of the total earnings of Exxon due to the depressed margins in the downstream and chemical segments but in 2020 the upstream segment incurred losses of -\$20 billion due to the pandemic.

The pandemic severely hurt all the segments of Exxon. It caused suppressed oil prices, reduced output and depressed refining and chemical margins. The latter used to provide a buffer to the results of Exxon during downturns but this was not the case last year. Exxon was expelled from the Dow Jones Index in 2020, after 92 years of continuous presence.

In late July, Exxon reported (7/30/21) financial results for the second quarter of fiscal 2021. Production in the Permian grew 34% over last year's quarter but total production dipped -2% due to maintenance activity. However, the chemical segment posted record earnings of \$2.3 billion thanks to high margins. In addition, the upstream segment thrived thanks to the rally of the price of oil, which resulted from the deep production cuts of OPEC and Russia and the recovery from the pandemic. As a result, Exxon switched from an adjusted loss of -\$0.70 per share in last year's quarter to an adjusted profit of \$1.10 per share.

Thanks to the favorable oil prices and chemical margins prevailing right now, we expect Exxon to marginally raise its dividend in the fourth quarter of the year in order to maintain its 38-year dividend growth streak. Nevertheless, the dividend could come under pressure again whenever the next downturn of the energy sector shows up.

Growth on a Per-Share Basis

Year	2011	2012	2013	2014	2015	2016	2017	2018	2019	2020	2021	2026
EPS	\$8.42	\$9.70	\$7.37	\$7.60	\$3.85	\$1.88	\$3.24	\$4.88	\$2.44	-\$0.33	\$3.60	\$4.82
DPS	\$1.85	\$2.18	\$2.46	\$2.70	\$2.88	\$2.98	\$3.06	\$3.23	\$3.43	\$3.48	\$3.48	\$3.60
Shares¹	4,734	4,502	4,335	4,201	4,156	4,148	4,239	4,270	4,269	4,272	4,275	4,250

Cyclicality is the nature of Exxon's industry. The performance in 2019 and 2020 is a stern reminder that results are driven by commodity prices and hence they are highly volatile. Until recently, Exxon expected to grow its production from about 4.0 to 5.0 million barrels per day by 2025. However, it recently withdrew its guidance and now expects flat output due to its commitment to its dividend, which will result in lower investment in growth projects. Exxon has about 10 billion barrels of oil equivalent in the Permian and expects to reach production of more than 1.0 million barrels per day in the area by 2025. Guyana, one of the most exciting growth projects in the energy sector, is the other major growth project of Exxon. The company has nearly tripled its estimated reserves in the area, from 3.2 billion barrels in early 2018 to nearly 9.0 billion barrels now. Management has stated that 90% of new reserves have a production cost of \$35 per barrel and thus it views the dividend as viable at Brent prices above \$45. However, we believe that the dividend will come under pressure whenever the next downturn of the energy sector shows up. Despite flat output, we expect Exxon to grow its earnings-per-share by 6.0% per year on average over the next five years off this year's low comparison base, mostly thanks to improved refining and marketing margins.

Valuation Analysis

Year	2011	2012	2013	2014	2015	2016	2017	2018	2019	2020	Now	2026
Avg. P/E	9.5	10.7	12.3	12.8	21.5	45.8	25.3	14.0	30.2	---	15.6	13.0
Avg. Yld.	2.3%	2.5%	2.7%	2.8%	3.5%	3.5%	3.7%	4.7%	4.7%	7.8%	6.2%	5.7%

During the past decade, Exxon has traded at an average price-to-earnings ratio of 20.2, but this includes “artificial” years when profits dropped dramatically while the share price held up much better. During 2009-2015, the average multiple was closer to 13 or 14 times earnings. This is a number we view as fair. Exxon is currently trading at a price-to-earnings ratio of 15.6. If its earnings multiple falls to 13.0 in five years, the stock will incur a -3.5% annualized drag in its returns.

Safety, Quality, Competitive Advantage, & Recession Resiliency

Year	2011	2012	2013	2014	2015	2016	2017	2018	2019	2020	2021	2026
Payout	22%	22%	33%	36%	75%	159%	94%	66%	141%	---	96.7%	74.7%

Exxon’s competitive advantage is its unparalleled scale and its enviable expertise in the energy sector. The standard technical procedures followed by most oil companies have been written by Exxon. It is also impressive that other oil companies drilled about 40 dry holes in Guyana whereas Exxon has a nearly 90% success rate in this area.

Exxon’s diversified business model has shown exceptional fortitude in good times and bad. When commodity prices are high, Exxon takes full advantage on the upstream side. When prices are low, the downstream and chemical segments usually offer a good deal of ballast. Exxon is much more defensive than most oil majors during recessions and downturns of the energy sector, but it rallies less than its peers during good times. Overall, it is a defensive energy stock.

Exxon is a Dividend Aristocrat, with 38 consecutive annual dividend raises. However, the oil major has paid the same dividend for ten consecutive quarters and it is struggling to maintain its dividend amid the pandemic. We expect Exxon to defend its dividend growth streak but the dividend will come under pressure in the event of a prolonged pandemic.

Final Thoughts & Recommendation

Exxon is recovering strongly from the pandemic thanks to the massive ongoing vaccination program, the aggressive OPEC+ production cuts and pressure from shareholders for changes in management. We expect the stock to offer a 7.5% average annual return over the next five years and thus we rate it as a hold.
