Overview & Current Events

Freeport-McMoRan is a leading global mining company that is headquartered in Arizona. The company operates large, long-lived, geographically diverse mines with significant reserves of copper, gold, and molybdenum. The geographical footprint includes Indonesia, North America, South America, and Africa. It produces roughly four billion pounds of copper annually, and more than 2 million ounces of gold. Freeport-McMoRan should generate about \$23 billion in revenue this year and has a market capitalization of \$58 billion.

Freeport posted second quarter earnings on July 20th, 2023, and results were mixed. Adjusted earnings-per-share came to 35 cents, which was two cents worse than expected. Revenue was up 6% year-over-year to \$5.74 billion, and \$80 million ahead of expectations.

Net income plummeted 59% year-over-year to \$343 million, despite the fact that sales rose 6% from the same period a year ago. Q2 sales of copper fell 5.3% year-over-year to 1.03 billion pounds, while production slipped fractionally to 1.07 billion pounds. Average realized copper price fell 5.2% to \$3.82 per pound. Net unit cash costs increased 4.3% year-over-year to \$1.47 per pound. This movement between prices and costs is what caused margins to fall so sharply, and with it, net earnings.

Gold sales gained 4% year-over-year to 495 thousand ounces while production rose 1.5% to 483 thousand ounces. Average realized gold price increased 6.3% to \$1,942 per ounce from last year's Q2.

We see \$1.70 in earnings-per-share after Q2 earnings, a sharp decline from prior estimates given the vast weakness in margins in the second quarter.

Growth on a Per-Share Basis

Year	2013	2014	2015	2016	2017	2018	2019	2020	2021	2022	2023	2028
EPS	\$2.64	-\$1.26	-\$11.31	-\$3.16	\$1.25	\$1.78	-\$0.17	\$0.54	\$3.13	\$2.44	\$1.70	\$2.38
DPS	\$1.25	\$1.25	\$0.46	---	---	\$0.20	\$0.20	\$0.05	\$0.23	\$0.30	\$0.30	\$0.40
Shares²	1038	1039	1246	1445	1448	1449	1451	1469	1482	1430	1430	1430

Freeport endured a tough period given metals pricing was weak for some time. However, those days have passed and 2021 and 2022 proved to be much stronger. However, it has become clear the pricing of copper in particular wasn't sustainable. Given the decline in earnings estimates for this year, we're moving our growth estimate from 5% to 7%. With earnings expected to decline again in 2023, we see sustained growth from here as more challenging considering it would need another sustained rise in metals pricing. Earnings have now been reset lower to account for lower copper pricing and higher costs, as well as the possibility of at least a mild recession.

Freeport's future growth will be heavily dependent upon copper pricing, as that is where it derives most of its revenue. With copper volume being highly dependent upon global economic activity, it is susceptible to recessions. With the company saving money on every line item of cost, margins reflat extremely quickly with higher copper prices. Still, we note that as with any commodity company, Freeport's revenue and margins have significant volatility from year to year,

so this forecast has significant upside and downside risk due to factors outside of Freeport's control. We saw this in action in the Q2 report where costs moved higher while pricing fell, squeezing profitability.

Valuation Analysis

Year	2013	2014	2015	2016	2017	2018	2019	2020	2021	2022	Now	2028
Avg. P/E	12.4	16.4	---	45.6	11.9	10.3	---	25.5	11.5	15.5	24.1	13.0
Avg. Yld.	3.8%	3.8%	3.0%	---	---	1.3%	1.8%	0.3%	0.8%	0.8%	0.7%	1.3%

Perhaps unsurprisingly, Freeport's price-to-earnings multiple has been quite erratic in the past decade. The company's wild swings in earnings have produced some very large and very small P/E multiples in the past, and shares trade for 24.1 times our earnings estimate after we assigned lower 2023 earnings. We assign fair value at 13 times earnings given this volatility, and the fact that commodity companies tend to see lower valuations during times of economic stress. With this, we expect an 11.6% headwind to total returns from the valuation.

Freeport reinstated its dividend in April 2021, paying a 7.5 cent per share dividend, which is good for 30 cents annually. It has also been paying discretionary dividends of 7.5 cents per share, per quarter, and that may or may not continue.

Safety, Quality, Competitive Advantage, & Recession Resiliency

Year	2013	2014	2015	2016	2017	2018	2019	2020	2021	2022	2023	2028
Payout	48%	64%	---	---	---	10%	---	9%	7%	12%	18%	17%

The new payout ratio is extremely low, so we believe it to be safe for the foreseeable future. We see growth in the payout from here as somewhat modest given the company very recently had to suspend its dividend altogether.

The company's competitive advantage – if it has one – is in its scale. Freeport produces enormous volumes of copper and can therefore generally achieve lower product costs. However, it is still a mining company and advantages are difficult to come by. The company also suffers greatly during periods of economic weakness due to its exposure to copper, and it has almost \$10 billion in long-term debt on its balance sheet. It pays hundreds of millions of dollars annually just in debt servicing costs, so its prospects for getting out of debt are quite dim given unpredictable earnings. We see the balance sheet as a significant negative for Freeport and note that it greatly increases risks for shareholders.

Final Thoughts & Recommendation

We see Freeport-McMoRan as a high-risk way to enter the commodity space. The company's exposure to copper is very profitable during times of strong economic activity, but devastating in weak periods. We forecast -4.4% annual returns from here. This is lower than our last report given the stock price performance. The stock is still well into sell rating territory.
