Overview & Current Events

Deere & Company is the largest manufacturer of farm equipment in the world. The company also makes equipment used in construction, forestry & turf care, produces engines and provides financial solutions to its customers. Deere was founded in 1837, is headquartered in Moline, Illinois and is currently valued at \$111 billion.

In mid-May, Deere reported (5/16/24) financial results for the second quarter of fiscal 2024. Sales decreased -12% over the prior year's quarter due to lower demand in all the segments amid tough comparisons. Earnings-per-share dipped -12%, from \$9.65 to \$8.53, but exceeded the analysts' consensus by \$0.61. Management characterized current business conditions as tough. Indeed, the last three quarters have marked a sharp deceleration over the previous quarters. Due to this deceleration and its expectation for volume sales to revert to mid-cycle levels, Deere lowered its already lackluster guidance for its earnings in this fiscal year from \$7.50-\$7.75 billion to about \$7.0 billion. We have thus lowered our forecast for earnings-per-share from \$27.40 to \$25.50. We agree with management's view and do not expect Deere to revert to last year's record profitability anytime soon.

Growth on a Per-Share Basis

Year	2014	2015	2016	2017	2018	2019	2020	2021	2022	2023	2024	2029
EPS	\$8.63	\$5.77	\$4.81	\$6.68	\$9.34	\$9.92	\$8.69	\$18.99	\$23.98	\$34.63	\$25.50	\$29.56
DPS	\$2.22	\$2.40	\$2.40	\$2.40	\$2.58	\$3.04	\$3.04	\$3.61	\$4.36	\$5.05	\$5.88	\$8.32
Shares²	346	317	315	322	318	313	317	314	302	287	275	250

Deere's earnings-per-share are relatively cyclical. Depending on the conditions in the markets the company addresses (agriculture, forestry, and construction), demand for Deere's products can vary widely on a year-to-year basis. Overall, the earnings-per-share growth trend is positive, but it took Deere five years to grow its EPS above the peak from 2013. In the 2008 through 2019 period, excluding 2020's down year, Deere grew its earnings-per-share by 7% per annum. Of course, 2021 proved to be a standout year amidst a bounce back from the COVID-19 pandemic.

There are many factors that could fuel growth for Deere. For instance, acquisitions such as the takeover of Wirtgen Group in late 2017. In addition, long-term global economic growth and share buybacks could add to the growth thesis. The company reduced its share count by -25% between 2008 and 2016 so it could ramp up buybacks in the future.

Fiscal year 2020 was difficult, but results came in better than anticipated, down less than -15% amidst the COVID-19 pandemic. Moreover, Deere has posted record results in each of the last three years. We are forecasting 3.0% intermediate-term growth, as it is uncertain as to whether the recent boon to results is transitory or here to stay.

Valuation Analysis

Year	2014	2015	2016	2017	2018	2019	2020	2021	2022	2023	Now	2029

Deere & Company (DE)

Updated May 21st, 2024, by Aristofanis Papadatos

During the past decade, the stock of Deere has traded at an average price-to-earnings ratio of 15.5. We assume a fair price-to-earnings ratio of 16.0, which is the 5-year average of the stock. Deere is now trading at an earnings multiple of 15.3. If the stock trades at its fair valuation level in five years, it will enjoy a 0.9% annualized gain in its returns.

Safety, Quality, Competitive Advantage, & Recession Resiliency

Year	2014	2015	2016	2017	2018	2019	2020	2021	2022	2023	2024	2029
Payout	26%	42%	50%	36%	27%	31%	35%	19%	18%	15%	23%	28%

Deere's dividend payout ratio has never been especially high. The company paid out ~50% of its net profits during 2016. Since then, the payout ratio has trended downwards as earnings-per-share have risen considerably. We believe that the dividend is quite safe, but dividend growth has not been overly reliable in the past – during 2015 to 2017 the company froze its dividend at \$2.40 each year. More recently, Deere paid the same dividend for 9 quarters in a row.

Deere is the largest player in the agricultural machinery manufacturing industry. This means that it is hard for new competitors to steal market share from Deere, especially since it is difficult to replicate the company's global sales and dealership network. Deere has also been growing its presence in the higher-growth construction machinery market, both organically as well as via acquisitions. The company is impacted by downturns in the industries it addresses. During the last financial crisis, Deere remained profitable, but its earnings-per-share declined by -40%. Earnings fell in 2020 due to the pandemic, but Deere proved more resilient than in previous downturns thanks to the immense fiscal stimulus packages offered by governments in response to the pandemic.

Final Thoughts & Recommendation

Deere is the market leader in the agricultural equipment industry, with its global presence providing sizeable competitive advantages. Growth has been solid during the last decade, albeit in a volatile fashion. Deere could offer a 5.4% average annual return over the next five years thanks to 3.0% expected growth, a 1.5% dividend and a 0.9% annualized valuation tailwind. It thus maintains its hold rating.
