Overview & Current Events

Bank of New York Mellon opened its doors in 1784 in the wake of the American Revolution, founded in part by Alexander Hamilton. The bank was the first ever to make a loan to the U.S. government and in the nearly 240 years since, has grown to more than \$17 billion in annual revenue and a market capitalization of \$54 billion. The bank is present in 35 countries around the world and acts as more of an investment manager than a traditional bank. Indeed, BNY Mellon's stated goal is to help its customers manage their assets throughout the investment lifecycle. As such, BNY Mellon's revenue is mostly derived from fees, not traditional interest income.

BNY posted third quarter earnings on October 11th, 2024, and results were better than expected on both the top and bottom lines. Adjusted earnings-per-share came to \$1.52, which was 10 cents ahead of expectations. Revenue was up 5.2% year-over-year to \$4.65 billion, which was \$90 million ahead of estimates.

Provisions for credit losses came to just \$23 million, which was driven by commercial real estate exposure losses, but we note this is a negligible level of losses for a bank of BNY's size.

Net interest income of \$1.05 billion was ~\$40 million higher than expected, and up from \$1.03 billion in Q2. Fee revenue, which is the bulk of the bank's total revenue, was \$3.40 billion, flat to Q2. That was \$140 million light of estimates, however, but was up 5% year-over-year. The gain was from higher market values, net new business, and higher forex revenue.

Noninterest expense was \$3.1 billion, roughly flat to both Q2 and last year's Q3. Average deposits were \$285 billion, flat to Q2. Average loans were up 1% to \$69 billion.

We now see \$5.85 in earnings-per-share for this year after another nice quarter for BNY.

Growth on a Per-Share Basis

Year	2014	2015	2016	2017	2018	2019	2020	2021	2022	2023	2024	2029
EPS	\$2.41	\$2.85	\$3.17	\$3.31	\$4.21	\$4.02	\$4.01	\$4.18	\$4.59	\$5.05	\$5.85	\$9.86
DPS	\$0.66	\$0.68	\$0.72	\$0.86	\$1.04	\$1.18	\$1.24	\$1.33	\$1.42	\$1.58	\$1.88	\$2.29
Shares¹	1,118	1,085	1,048	1,013	1,007	901	879	826	808	759	745	700

BNY Mellon's earnings-per-share were a bit underwhelming coming out of the financial crisis as they were roughly flat for six years. However, since 2013 BNY Mellon has fixed its efficiency issues, leading to better margins as it is now more prepared to take advantage of revenue increases. To that end, we are forecasting 11% earnings-per-share growth annually moving forward.

BNY Mellon can achieve this growth in a variety of ways. First, revenue continues to grow over time, something we expect to continue under normalized conditions. Its assets under custody and administration continue to grow as well, particularly during strong equity markets, which is a key driver of fee income. Its lending business is small but growing and continues to add to top line growth as well, although we caution against weakening economic prospects in this unit. We note that issues with AUM and lending margins tend to move in cycles, so BNY Mellon should see some respite from

its headwinds over time. We also see the bank continuing its share repurchases over time, resulting in a meaningful tailwind for earnings-per-share outside of revenue and earnings growth. Finally, we expect margins to continue to improve slightly over time as the bank realizes additional operating leverage from higher revenue outpacing expense growth. Investors would do well to continue to monitor expense growth against revenue growth for signs of margin deterioration. We note that higher equity prices are a direct benefit to BNY's margins, so higher stock market prices heading into 2024 should aid earnings for the foreseeable future, as they did in Q3.

Valuation Analysis

Year	2014	2015	2016	2017	2018	2019	2020	2021	2022	2023	Now	2029
Avg. P/E	15.1	14.5	12.7	15.1	12.6	11.9	9.6	12.2	9.9	10.3	12.6	12.0
Avg. Yld.	1.8%	1.6%	1.8%	1.7%	2.0%	2.5%	3.2%	2.6%	3.1%	3.0%	2.5%	1.9%

The stock's earnings multiple is now 12.6, nearly equal to our estimate of fair value at 12 times earnings. Given this, we see a small negative impact on total returns in the coming years from the valuation. We expect the dividend yield to return to about 1.9% in the coming years.

Safety, Quality, Competitive Advantage, & Recession Resiliency

Year	2014	2015	2016	2017	2018	2019	2020	2021	2022	2023	2024	2029
Payout	28%	27%	25%	29%	25%	29%	31%	32%	31%	31%	32%	23%

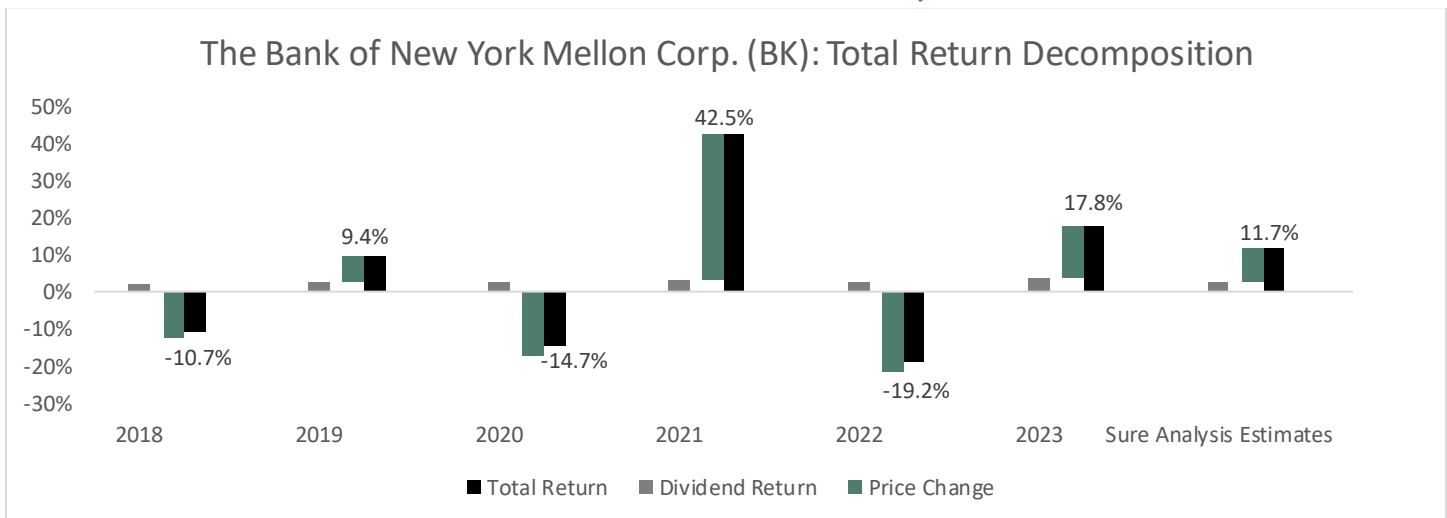

BNY Mellon's dividend is only about a third of its earnings, consistent with other large bank peers. That means the payout is very safe and we expect it to continue growing in the mid-single digits annually in the years to come, but slower than earnings growth.

BNY Mellon's competitive advantage is in its lack of reliance upon lending for revenue. This allows it to perform relatively well during recessions when other banks are struggling. While the company is not immune to downturns, its fee model is more resilient to such conditions than a bank that makes the majority of its revenue from interest income. Indeed, when many banks suffered in 2020, BNY Mellon saw essentially flat earnings year-over-year.

Final Thoughts & Recommendation

Overall, BNY Mellon looks like a slightly overvalued stock with strong growth potential. We are forecasting total annual returns of 11.7% going forward, given a 1% headwind from the valuation, 2.5% yield, and 11% earnings growth. We are reiterating the stock at a buy rating following Q3 results.
